EDUCATION

Georgia Institute of Technology (GT), Atlanta, GA

December 2027

Bachelor of Science, Major in Computer Science, Minor in Industrial Design

GPA: 3.64/4.00

- **Concentration:** Artificial Intelligence & Media

EXPERIENCE

Technical Lead Instructor @ iCode Augusta

May 2026 - Present

- Teaching Unity, Roblox Studio, Blender, and other technology platforms to K-12 students
- Deploying management software to regulate office devices and manage inventory
- Developing and implementing instructor onboarding and operational processes, streamlining integration into the business model and improving team efficiency

Game Developer @ VGDev GT

August 2024 - Present

- Creating 2D game art assets including background concept art, character concept art, splash illustrations, animated character sprites, and modular environment tilesets using Aseprite
- Collaborated with 15+ developers in weekly Agile design sprints to align art assets with mechanics and level design
- Implemented tile-shifting gameplay mechanics in GameMaker Studio as part of a 10-person gameplay team

Full Stack Developer @ WebDev GT (Collab Journal | LoFiLoop)

August 2024 - May 2025

- Integrated the OpenAI ChatGPT API to parse natural language prompts into music playback, queue management, and AI lo-fi generation for a real-time chat app
- Engineered the backend with 8 teammates, architecting live message handling for 100+ concurrent messages (Node, Express, Next.js, MongoDB)
- Developed responsive React components for the landing page, authentication flow, and a journal dashboard rendering user entries from RESTful endpoints
- Collaborated in two-week Agile sprints using Git-based version control and branch management, coordinating feature delivery across backend and frontend teams

PROJECTS

SpeechWrite – Speech Recognition Bias Analysis

February 2026

- Built a tool to measure bias in automatic speech recognition across 5+ English accent groups using Mozilla Common Voice dataset and OpenAI Whisper API
- Converted transcripts to phonemes and quantified substitutions/deletions, revealing 2-5x higher error rates for non-Western accents
- Generated interactive visualizations like heatmaps and charts, highlighting high-error phonemes and accent groups using Python and HTML

GTGuessr – Location Guessing Web Game

August 2025 - December 2025

- Created GeoGuessr-inspired web application for Georgia Tech using EXIF data and Google Maps API
- Processed EXIF data for image coordinates and implemented full-stack features with Django
- Followed Agile methodologies with 4 team members to plan and execute the project

The Orient – Automated Twitter Bot

January 2024 - May 2024

- Developed an automated Python Twitter/X bot using Tweepy and Requests to publish daily artwork posts with structured metadata (title, artist, period)
- Implemented a content generation pipeline that retrieved images from a local database, generated descriptions via the OpenAI ChatGPT API, and posted automatically on a scheduled interval, generating 800+ impressions

TECHNICAL SKILLS

Languages and Tools: Java, Python, JavaScript (Node, Express, React), HTML, CSS, MongoDB, Git, GameMaker Studio, Adobe InDesign, Adobe Photoshop, Computer-Aided Design

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Computer Architecture, AI, Computer Vision

Language: Fluent in English and Mandarin
