Education

Georgia Institute of Technology Atlanta, GA

B.S. in Computer Science (Media & AI), Minor in Industrial Design — 3.64/4.00 GPA *Expected Spring 2028*

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, AI, Computer Graphics, Procedural Content Generation, Machine Learning, Design & Analysis of Algorithms, Design Methods

Experience

Technical Lead Instructor May 2026 – August 2026

iCode STEM School *Augusta, GA*

- Taught Unity, Unreal Engine 5, UEFN, Roblox Studio to 100+ students through weekly project-based curriculum
- Managed the instructor team onboarding and technology documentation using Python and Reportlab
- Deployed and administered classroom management software across the Windows lab, resolving networking, permissions, and deployment issues

Game Developer August 2024 – August 2025

Georgia Institute of Technology | Video Game Development Club *Atlanta, GA*

- Implemented tile-shifting gameplay mechanics in GameMaker Studio as part of a 10-person gameplay team
- Created 2D art assets in Aseprite, including concept art, splash illustrations, animated character sprites, and modular environment tilesets
- Collaborated with 15+ developers in weekly Agile sprints to align art assets with mechanics and level design

Full Stack Developer August 2024 – May 2025

Georgia Institute of Technology | Web Development Club *Atlanta, GA*

- Built LoFiLoop's realtime chat backend with Socket.io and Express, broadcasting messages to all connected clients over a persistent WebSocket channel and storing chat history and a shared song queue in MongoDB
- Designed a 3-command slash system routing user input to backend handlers, integrating the OpenAI API with JSON-mode responses to convert natural-language song requests into structured title and artist data
- Built CollabJournal's landing and authentication pages, porting static markup into React components with react-router navigation, and resolved global CSS collisions across component stylesheets
- Collaborated with 8 teammates in 2-week Agile sprints using Git branch management

Projects

DataDump (GMTK Game Jam 2026) | *C#, Unity, Aseprite, Figma* July 2026

- Implemented smooth player-follow camera using Cinemachine with collider-based bounds that keep camera confined to the playable level, and a camera shake effect
- Scripted a multi-layer parallax background system that scrolls each layer at a different rate relative to player movement to create depth
- Created the game's environment with original hand-drawn assets and Unity Tilemap and 2D lighting systems

Adversarial Game AI Agent | *Python, NumPy* April 2026

- Built a game-playing agent for a two-player stochastic board game using negamax with alpha-beta pruning, iterative deepening to depth 8, and move ordering under a 4-minute total time budget
- Implemented a hidden Markov model tracking a moving hidden target across 64 cells, applying Bayesian updates from noisy sound and distance readings to a stationary-distribution prior
- Developed a 9-feature heuristic evaluation with BFS pathfinding to open squares when no scoring moves remain

Technical Skills

Languages: Java, Python, C#, Blueprints Visual Scripting, GameMaker Language (GML), C, JavaScript
Frameworks: Django, FastAPI, React, Node.js, Next.js, REST APIs, pandas, NumPy
Tools: Unity, Unreal Engine 5, Roblox Studio, Blender, Git, Figma, Aseprite, Adobe Photoshop, Vercel, MongoDB
